Anglian Water

Based at Whitham Park House in Lincoln, Anglian Water sought expansion to an adjacent building and fit-out experts Office Principles were tasked with delivering the 20,000 sq ft project.

Location: London

System: Float

Client: Office Principles

To support the new workplace layout, Movawall was appointed to provide acoustic and space division solutions that would enhance flexibility, collaboration and employee wellbeing throughout the fit-out.

According to the team responsible for the design of the space at RAW Brothers, "Their existing workplace had become tired and cramped. Intelliflo wanted to keep the startup energy and family feel.

According to Office Principles, "The designers worked with the client to create two distinctive working areas. One wing was orientated to workstations and activity-based working, for engineers and the other hosted a more collaborative environment, housing the main cafe, washrooms, agile working zones, sofas and quiet booths."

Thanks to a long history of collaborating on successful projects, Movawall was approached to deliver a flexible solution to fit the needs of this brief.

Made from 100% recycled polyester, our eco-friendly Serenity material was used to create a selection of Float panels – lightweight screens which allow for division of space quickly and easily.

The water droplet cut-out pattern demonstrates Serenity's versatility and adds some subtle branding to the space. In addition, several writable panels were installed to support collaborative working by offering extra writing space for team meetings and brainstorming sessions.
