Longwater

Working alongside TateHindle Architects and BAM Construction, Movawall was appointed to deliver a flexible space division solution as part of the Longwater development for Oxford Properties.

Location: Reading

System: Type 100M

Clients: Tate Hindle Architects, BAM

A Type 100M movable wall was installed to provide maximum versatility within the conferencing facilities, allowing the space to be quickly reconfigured to suit a variety of meetings, presentations and events.

When opened, the system creates a large, open environment, while closing the wall instantly divides the area into separate rooms without compromising acoustic performance.

The completed installation provides Oxford Properties with a highly adaptable conferencing facility, enabling multiple spaces to be created on demand and ensuring the building can accommodate clients and events of varying sizes with ease.
