QEII Centre

Working closely with the team at the QEII Conference Centre in Westminster, Movawall was appointed to help transform five newly refurbished event spaces.

Location: London

System: Type 100SE, Type G100

Movawall supplied and installed a combination of Type 100SE semi-automatic movable walls and Type G100 glazed movable walls.

As one of London's premier conference and events venues, the QEII Centre requires spaces that can be quickly adapted to accommodate everything from boardroom meetings and seminars to large-scale conferences and exhibitions. The combination of solid and glazed movable wall systems provides complete flexibility, allowing rooms to be divided or opened up with minimal effort while maintaining a premium aesthetic throughout.

The Type 100SE system offers the exceptional acoustic performance and robust construction of the Type 100 range, with semi-automatic retractable seals enabling fast, reliable operation. Alongside this, the Type G100 glazed movable walls maximise natural light and preserve clear sightlines, creating bright, open environments without compromising on flexibility.

Together, the two systems have delivered a versatile suite of event spaces that can be reconfigured quickly to suit the Centre's varied programme of conferences, exhibitions and corporate events, ensuring the venue continues to provide world-class facilities for clients and delegates alike.
